

```
import java.lang.*;

class First
{
    public static void main(String arg[])
    {
        System.out.println("Hello World");
    }
}
```

```
import java.lang.*;
```

```
class First
{
```

```
    public static void main (String arg [])
    {
        System.out.println("Hello World");
    }
}
```

always void
return type

return
type

main

* We have to save as First.java
* Every Java program is in class

* To Print output

* To access outside of class
then it should be public

Why static?

↳ To create class first we have
to create object. here we are
not creating any object so we
call as static
